DETAILED ACTION

Claim Rejections - 35 USC § 103

Claim 1-2 & 4-22, 25-28 rejected under 35 U.S.C. 103(a) as being unpatentable over Sawada et al 20020132177 in view of Sawada et al [6821698]. Applicants' arguments have been carefully considered by deemed not persuasive in view of the following. Sawada et al '77' teaches a black metal containing toner composition. The specific gravity and saturation magnetization are within applicants' ranges. Sawada et al '98' teaches a toner with a binder that has crystalline polyester and second polyester. The use of both polyester controls the physical properties of the binder such as glass transition temperature and the melt viscosities of the binder. Both are important physical properties of a toner that is used in a heat fixing method. The image forming method and device utilizing the toner are taught in Sawada et al. It would be obvious to one of ordinary skill in the art at the time of applicants' invention with a reasonable expectation of success to use the binders having a crystalline and non-crystalline polyester with a black metal-containing material in a toner composition utilized in a method and device in which the physical properties are known.

Double Patenting

1. Claims 1-28 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-18 of copending Application No. 10/800636. Although the conflicting claims are not identical, they are not patentably distinct from each other because both claim a toner with a black metal oxide having a titanium component as the colorant.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

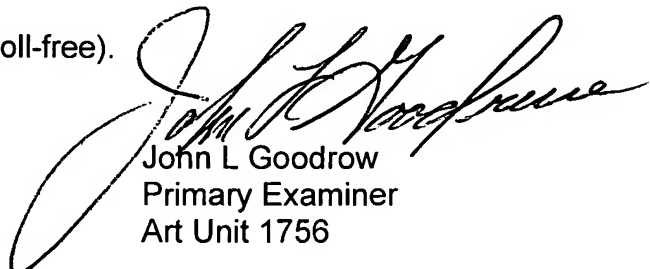

2. Claims 3, 23, and 24 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

This action is Final.
